Part 3

How are the federal land managers integrating the compatibility of the National Environmental Policy, Energy Policy, and the Clean Water Action in managing the Watersheds so as to enhance environmental sustainability.? It would be interesting to hear how they are going to approach managing the watersheds in a different manner so as to answer the question. It would more interesting to know what intrinsic environmental management concepts they are prepared to employ so as to have sustainability. If there isn't a strategic relationship to accommodate compatibility, then the other alternative to re-write the policies which then means , the managers have given up in the holistic pursuit of environmental management and resided to myoptic management, which is backsliding to where the whole process begun.

Preston Kinne. Environmental Manager. M.S.E.M. C.E.S.,C.E.I
